

Release Notes

Orchestra

Image Compiler
1.0.1.0

Release Notes - Image Compiler 1.0.1.0

Release Content

In these release notes you can find the new and improved features as well as the bugfixes for the current Orchestra version.

The Orchestra versions are sorted in chronological order by their release date. It is started with the latest version.

Table of Contents

1. Image Compiler 1.0.1.0

1.1 Known Issues

1.2 New Features

1.2.1 Image Compiler

1.3 Bugfixes

1.3.1 Image Compiler

1.4 Solved OFINDS

Image Compiler 1.0.1.0

Known Issues

- OFIND-2756
Image Compiler Tomcat 1.0.1.0 only working with Orchetsra 4.15.0.0

New Features

Image Compiler

- Added support to push compiled image to a registry.
The command image-compile can be used to push the compiled image to a registry. Further more, a new command pushImage is added to push the image file to a registry.

- Added new parameter named "architecture" to command createBaseImage.
This parameter allow you to define the architecture of dockerfile template that is used to create base image, the options are x86 and arm.

Bugfixes

Image Compiler

- Fixed problems for image compiler:
 - Added support of compressed Orchestra image (.gz and .zip) to command image-compile.
 - Added quote to environment entry value "yes" and "no" in docker compose file.
 - Removed environment "ORCHESTRA_CONTAINER_MODE_ACTIVE" from docker compose file.
 - Fixed SLF4J warning.
 - Improved error messages on console, stack traces are not printed to console by default. If you want to see full stack trace on console, use parameter "-showStackTrace".
- Improved Help&Manual:
 - Described image compiler environment script.
 - Described PSX file and licensing to read PSX file.
 - Corrected description of copy parameter of updateImage command.
 - Described parameter showStackTrace to supported commands.
 - Described parameter architecture of createBaseImage command.
 - Described command pushImage.
 - Described push image parameters of image-compile command.
 - Described which commands are required the docker engine.
- Fixed handling of Orchestra-CD and backward compatibility
Images created for Orchestra 4.15 CD Package could not be started du to changes in the release structure. With this change, it is possible to create images also for the cd-packages. Furthermore, the image compiler can be used to create images for older orchestra versions. It was tested with orchestra artifacts 4.12 and 4.15. Side effects on older orchestra versions can not be excluded completely.
